ARIZONA STATE UNIVERSITY

PROPOSAL TO ESTABLISH A NEW UNDERGRADUATE CONCENTRATION

The completed and signed proposal should be submitted by the Dean’s Office to: curriculumplanning@asu.edu.

Before academic units can advertise undergraduate concentrations or include them in their offerings as described in the university catalogs, they must be recommended for approval by the Senate Curriculum and Academic Programs Committee and approved by the Executive Vice President and Provost of the University.

Definition and minimum requirements:

A concentration is a formalized selection of courses within a major.

- A concentration requires a minimum of 15 semester hours of which at least 9 semester hours must be upper division. Specialized concentrations (e.g., BIS Concentrations) may have additional or different requirements.
- A concentration is offered by a single unit and is intended exclusively for students pursuing a particular major. If a concentration consists of courses from more than one college the approval of each college Dean is required.

College/School/Institute: College of Liberal Arts and Sciences

Department/Division/School: School of Life Sciences

Proposing Faculty Group (if applicable):

If this is an official joint degree program? No, this is not a joint degree program

If “Yes” List all the additional college(s)/school(s)/institute(s) that will be involved in offering the degree program and providing the necessary resources. Note: All units offering this program must have collaborated in the proposal development and completed the appropriate unit and college/school approvals.

Existing Degree and Major under which this concentration will be established: BS Microbiology

Proposed Concentration Name: Biomedical Sciences

What is the first catalog year available for students to select on the undergraduate application for this this program? 2015-16

Delivery method:

On-campus only (ground courses and/or iCourses)

Note: Once students elect a campus or On-line option, students will not be able to move back and forth between the on-campus and the ASU Online options. Approval from the Office of the Provost and Philip Regier (Executive Vice Provost and Dean) is required to offer programs through ASU Online.

Campus/Locations: indicate all locations where this program will be offered.

☐ Downtown Phoenix ☐ Polytechnic ☒ Tempe ☐ West Other:

Proposal Contact

Name: Valerie Stout
Phone number: 480-965-4617
Title: Assoc. Professor
Email: vstout@asu.edu

DEAN APPROVAL(S)

This proposal has been approved by all necessary unit and College/School levels of review. I recommend implementation of the proposed organizational change.

College/School/Division Dean name: Paul LePore

Signature ___________________________ Date: 1/20

College/School/Division Dean name: (if more than one college involved)

Signature ___________________________ Date: 1/20

Note: An electronic signature, an email from the dean or dean’s designee, or a PDF of the signed signature page is acceptable.
1. OVERVIEW

A. Provide a brief description of the new concentration (including the specific focus of the new concentration, relationship to other concentrations in this degree program, etc).

This Biomedical Sciences concentration within the Microbiology BS degree program in the School of Life Sciences will serve our undergraduate students who aim to pursue career interests in health professions or biomedical research. The proposed concentration curriculum aligns with the 2009 Report of the AAMC-HHMI Committee that identified scientific competencies that premedical students should demonstrate before entry into medical school. In addition to integrative course work in microbiology, interdisciplinary sciences, medical humanities, and communication, the concentration and curriculum emphasizes defined areas of knowledge, scientific concepts, and skills. Upon completion of the BS in Microbiology with a concentration in Biomedical Sciences, students will demonstrate knowledge of and ability to use basic principles of biology, biochemistry, chemistry, mathematics, physics and statistics needed for the application of the sciences to health and disease. Recognizing that medical schools, graduate schools, and health professions require the ability to deal with rapidly changing scientific knowledge, the Biomedical Sciences concentration will emphasize core concepts, competencies, and critical intellectual skills necessary to succeed. It will offer a robust liberal arts education that values, reinforces, and integrates analytical thinking, reasoning, quantitative assessment, and analysis of complex systems in biology.

B. Explain the unit’s need for the new concentration (e.g., market demand, research base, direction of the discipline, and interdisciplinary considerations). How will the new concentration complement the existing degree program?

Approximately 70% of freshmen entering the School of Life Sciences identify themselves at “pre-med.” However, a large fraction of pre-med students in Arizona choose to attend the University of Arizona because of the archaic perception that the med school in Tucson provides better technical training for pre-med students. Given the change in emphasis of the top medical schools and the MCAT from coursework to broad competencies, the Biomedical Sciences concentration under the BS in Microbiology is an excellent opportunity for ASU to break down an inaccurate stereotype. Many of the students in our Microbiology major plan to attend medical school or graduate school to study infectious disease, for example. We don’t have a concentration in Microbiology that makes these career paths explicit. While most of the core courses in the Microbiology degree program are maintained, the concentration asks student to take more eukaryotic life sciences courses, as well as courses that relate more directly to human biology and society – consistent with the competencies identified in the 2009 Report of the AAMC-HHMI Committee on premedical education. The concentration will provide a more streamlined program of study within Microbiology to meet the changing demands on undergraduate education for premedical students. The new concentration emphasizes a strong and broad liberal education with a depth of knowledge and critical intellectual skills necessary for professional success. It will help those seeking premedical education or a career path in biomedical research to achieve analytical and scientific thinking skills needed to effectively address societal problems of health and disease.

2. Support and Impact

A. Provide a supporting letter from the chair of the academic unit verifying that the proposed concentration has received faculty approval through appropriate governance procedures in the unit and that the unit has the resources to support the concentration as presented in the proposal, without impacting core course resources.

See attached letter from Brian Smith, Director, School of Life Sciences

B. Identify other related ASU programs and outline how the new concentration will complement these existing ASU programs. (If applicable, statements of support from potentially-affected academic unit administrators need to be included with this proposal submission.)

Medical schools do not favor highly specialized technical degree programs, and they will admit qualified students from almost any degree program in CLAS. However, over the last 10 years, the majority of ASU students who have attended medical school have graduated from the School of Life Sciences. This concentration has very little resemblance to any degree programs outside of the School of Life Sciences, although it will require a course in public health offered by SHESC.

C. Provide a supporting letter from each college/school dean from which individual courses, or the entire concentration, are taken.

3. Academic Curriculum and Requirements
A. List the knowledge, competencies, and skills (learning outcomes) students should have when they complete this proposed concentration. Examples of program learning outcomes can be found at (http://www.asu.edu/out/assessment.html).

Learning outcomes are based on the core concepts and competencies identified in the 2009 Report of the AAMC-HHMI Committee on premedical education, and Vision and Change in Biology Undergraduate Education: A Call to Action. Graduates of the Microbiology-Biomedical Sciences concentration will be able to:

1) demonstrate knowledge of and ability to use basic principles in microbiology including concepts in molecular genetics, immunology, and cell biology, for the application of the sciences to health and disease
2) express practical understanding of the process of science, including how to read and critically examine current microbiology literature, develop hypotheses, design and conduct experiments, and quantitatively assess and analyze data
3) use written and oral communication skills to effectively communicate scientific concepts in medical microbiology to others with varying levels of scientific literacy
4) and demonstrate knowledge of and ability to use principles in chemistry, organic chemistry, biochemistry, physics, and mathematics to complex biological problems.

Biology educators are developing more sophisticated and comprehensive assessments, but initially, we will assess program success using the following criteria:

OUTCOME 1: Able to conduct a lab experiment, as evidenced by ability to:
- identify, describe, and apply the processes of science, including basic techniques such as the use of controls
- select and defend the appropriate scientific methodology either to test a given hypothesis and prediction or to answer a given question as it relates to a descriptive study
- distinguish between information that is recognized as well established (beyond reasonable doubt) versus information that is tentative
- evaluate whether data support a particular hypothesis
- evaluate the validity of hypotheses and predictions put forth by other researchers

Measure 1.1: Will create scenario with response questions (addressing above competencies) for BIO 281
Performance Criterion 1.1: 75% of students will master above competencies in BIO 281

Measure 1.2: Final lab assignment in BIO 282 (will address above competencies)
Performance Criterion 1.2: 75% of majors will master above competencies in BIO 282

OUTCOME 2: Will demonstrate general competency in genetics, as evidenced by ability to:
- Identify and describe major elements of the molecular anatomy of genes and genomes.
- Deduce information about genes, alleles, and gene functions from analysis of genetic crosses and patterns of inheritance.
- Deduce information about genes, alleles, and gene functions from analysis of genetic crosses and patterns of inheritance, as evidenced by ability to:
- Infer modes of trait inheritance from human pedigrees
- Evaluate hypotheses about genetic transmission by applying statistical tests to the results of crosses

Measure 1.1: Will create scenario with response questions (addressing above competencies) for BIO 340
Performance Criterion 1.1: 75% of students will master above competencies in BIO 340

OUTCOME 3: The MIC 401 research paper allows for a great deal of one on one interaction with faculty, since the paper is highly individualized for each student. MIC 302 is required for all Microbiology majors, and provides a strong foundation for students who enter this degree program. The combination of strong faculty/student interaction and mentoring has contributed to meeting the outcome goals for this program.

Measure 1.1: 15 page research paper in MIC 401
Performance Criteria 1.1: 85% of majors perform at a B or higher on the research paper
B. Provide the admissions criteria for the proposed concentration. If they are identical to the admission criteria for the existing major and degree program under which this concentration will be established, please note that here.

The admission criteria for the Biomedical Sciences proposed concentration is identical to the admissions criteria for the existing Microbiology degree program under which this concentration is established.

C. Provide the curricular structure for this concentration. Be specific in listing required courses and specify the total minimum number of hours required for the concentration.
### Required Core Courses for the Degree/Major

*MAT hours should count towards University hour requirement and not towards major hours.*

**Total minimum credit hours required for concentration**: 60-63
D. A minimum residency requirement: How many hours of the concentration must be ASU credit?

15 hours

E. Provide a brief course description for each new course.

Note: All new required courses should be submitted in Curriculum Changemaker and ready for Provost’s Office approval before this concentration is put on the CAPC agenda.

None

4. Administration and Resources

A. How will the proposed concentration be administered (including admissions, student advisement, retention, etc.)?

Same as our other majors and concentrations - Under the direction of Scot Schoenborn, the SoLS Advising Office will continue to support the advising needs of SoLS Microbiology students, including the Microbiology-Biomedical Sciences students. The SoLS Advising Office will work in conjunction with SoLS Undergraduate Programs to continue to increase retention in our existing and new concentrations. The admission requirements for this concentration will be the same as they are for all programs within the School of Life Sciences.

B. What are enrollment projections for the next three years?

(Yr 1 continuing + new entering)
(Yr 1 & 2 continuing + new entering)

C. What are the resource implications for the proposed concentration, including any projected budget needs? Will new books, library holdings, equipment, laboratory space and/or personnel be required now or in the future? If multiple units/programs will collaborate in offering this concentration please discuss the resource contribution of each participating program. Letters of support must be included from all academic units that will commit resources to this concentration.

We expect to have increased enrollment in several large upper-division courses - Required Concentration Courses and Elective Concentration Courses. This will require us to allocate additional TAs to these courses. If possible, we will cover the additional TA lines with SOLS undergraduate program fees.

D. Please list the primary faculty participants regarding this proposed concentration. For interdisciplinary concentrations, please include the relevant names of faculty members from across the University.

5. Additional Materials
A. Prepare and attach a Major Map. Please use the "proposed map" function to create a Major Map in BAMM. This feature is explained in the training document available on help.asu.edu.
B. Complete and attach the Appendix document.
C. Attach other information that will be useful to the review committees and the Office of the Provost.
Proposed Concentration Name: Microbiology (Biomedical Sciences)

1. Program Description (150 words maximum)
   The biomedical sciences concentration serves students in the microbiology BS degree program who aim to pursue careers in health professions, medical microbiology or other areas of biomedical research. The curriculum aligns with the scientific competencies recommended for premed students in a report of the American Medical Colleges and the Howard Hughes Medical Institute Committee, and also reflected in the 2015 changes to the Medical College Admission Test (MCAT). Course work includes many of the courses in the microbiology major, including chemistry, biochemistry, math and physics, but some microbiology courses have been replaced with cell biology, animal physiology and courses that relate to human biology and society. The concentration emphasizes core concepts, competencies and critical intellectual skills necessary to succeed in medical school or biomedical research. The course work that students need to prepare for the MCAT or medical school admission are included in the concentration.

2. Contact and Support Information
   Office Location (Building & Room): LSC 206
   Campus Telephone Number: 480/727-6277
   Program email address: sols.advising@asu.edu
   Program website address: https://sols.asu.edu/

3. Additional Program Description Information
   A. Additional program fee required for this program? Yes ☐ No ☑
   B. Does this program have a second language requirement? Yes ☐ No ☑

4. Delivery/Campus Information
   Delivery
   ☑ On-campus only (ground courses and/or iCourses) (check campus(es)/locations below)
   ☐ ASU Online only (all courses online)*
   ☐ Both on-campus and ☑ ASU Online*

   * Note: Academic units must obtain prior approval from the Office of the Provost and Philip Regier (Executive Vice Provost and Dean) to offer programs through ASU Online.

   Campus(es) and/or Locations Check all locations where the program will be offered.
   ☐ Downtown ☐ Polytechnic
   ☑ Tempe ☐ West
   ☐ Other (please specify)
**Operational Information:** Once students elect a campus or On-line option, students will not be able to move back and forth between the on-campus the ASU Online option.

5. **Career Opportunities & Concentrations** Provide a brief description of career opportunities available for this degree program with the proposed concentration.

Upon completing the bachelor's in microbiology with a concentration in biomedical sciences, students will have completed the majority of prerequisite requirements and mastered many of the competencies valued by graduate programs in medical, dental, physician assistant, physical therapy and optometry. Additionally, graduates of this program will have a practical understanding of the process of science preparing them for a career in research. Students will have knowledge of foundational concepts in biological sciences, chemistry, physics and statistics, as well as the ability to understand and apply core microbiology concepts. This will prepare students to enter research in a number of areas including, but not limited to, cellular biology, immunology, bacteriology and virology.

6. **Additional Admission Requirements** If applicable list any admission requirements (freshman and/or transfer) that are higher than and/or in addition to the university minimum undergraduate admission requirements.

None

7. **Keywords** List all keywords used to search for this program. Keywords should be specific to the proposed program.

Premed; pre-med; pre-medical; premedical; medicine; medical; med school; microbiology; microbes; immunology; bacteriology; virology;

8. **Advising Committee Code** List the existing advising committee code associated with this degree. BS in Microbiology (LAMCBS) are assigned to the Liberal Arts Life Sciences (UGASLS).

9. **Western Undergraduate Exchange (WUE) Eligible:**

Has a request been submitted to the Provost by the Dean to consider this degree program as eligible for WUE? (Select Yes/No)

Note: No action will be taken during the implementation process with regards to WUE until approval is received from the Provost.

10. **First Required Math Course** List the first math course required in the major map.

STP 231

11. **Math Intensity**

   a. List the highest math required on the major map. (This will not appear on Degree Search.)

   MAT 251

   b. What is the math intensity as indicated by the highest math required on the major map? Math intensity categorization can be found here: https://catalog.asu.edu/mathintensity

   Moderate

12. **CIP codes**

   a. Identify CIP codes that should be displayed on Degree Search. CIP codes can be found at: http://www.onetonline.org/crosswalk/CIP/.

   19-1022.00
   29-1021.00
   29-1051.00
   29-1067.00
   29-1071.00
   29-1062.00
   29-1063.00
   29-1041.00
b. Are any specific career codes (SOC/ONET codes) to be omitted from the CIP codes selected above? (i.e. “Omit 25-10312.00 Engineering Teachers, Postsecondary from CIP code 14.0501 Bioengineering and Biomedical Engineering.”)

13. Area(s) of Interest

A. Select one (1) primary Area of Interest from the list below that applies to this program.

- Architecture, Construction & Design
- Artistic Expression & Performance
- Biological Sciences, Health & Wellness
- Business, Management & Economics
- Communication & Media
- Computing & Mathematics
- Education & Teaching
- Engineering & Technology
- Environmental Issues & Physical Science
- Interdisciplinary Studies
- Languages & Cultures
- Law & Justice
- Social Science, Policies & Issues

B. Select any additional Areas of Interest that apply to this program from the list below.

- Architecture, Construction & Design
- Artistic Expression & Performance
- Biological Sciences, Health & Wellness
- Business, Management & Economics
- Communication & Media
- Computing & Mathematics
- Education & Teaching
- Environmental Issues & Physical Science
- Engineering & Technology
- Interdisciplinary Studies
- Languages & Cultures
- Law & Justice
- Social Science, Policies & Issues

**Notes**

- An SAT, ACT, Accuplacer, or TOEFL Score determines placement into first-year composition courses.
- ASU Mathematics Placement Test score determines placement in Mathematics course.
- ASU 101 or College specific equivalent First Year Seminar required of all freshman students.
- Students planning to attend medical school will take CHM 233/237 this term instead of CHM 231/235.
- Students planning to attend medical school will take CHM 234/238 this term instead of an elective.
- Students planning to attend medical school will take BCH 461 this term instead of BCH 361/367a1.
- Students planning to attend medical school will take PHY 311/113 this term instead of PHY 101.

---

- All students pursuing a B.S. or B.S.P. degree in the College of Liberal Arts and Sciences must complete two courses from the Science and Society list found at https://class.asu.edu/advising-and-academic-services/science-and-society. At least one of the two courses must be upper division. Students must earn a C or better in the courses, and no more than one of the two can also be used to simultaneously fill a requirement of the major, minor, or related area. Science and Society courses cannot also be used to fill the general studies HU, SB, SQ or SG requirements.

**Notes:**
- MIC 360 or MIC 441 may be taken for the upper division elective in this term to facilitate registration for MIC 401 in term 6.
- Students planning to attend medical school will take PHY 112/114 this term instead of an elective.
- Students planning to attend medical school will take BCH 462/467 this term instead of an upper division elective.
- Courses from the Microbes and Biomedicine course groups must include at least one course from each category and at least one (1) lab course.
- Courses from the Microbes and Biomedicine course groups must include one (1) lab course.
Please keep in mind that the applicability of a specific transfer course toward an ASU degree program depends on the requirements of the department, division, college or school in which you are enrolled at ASU. Transfer agreements that guarantee the completion of university level requirements do not necessarily meet college and major requirements. Please consult with an advisor for more information.

Total Hours: 120
Upper Division Hours: 45 minimum
Major GPA: 2.00 minimum
Cumulative GPA: 2.00 minimum
Total hrs at ASU: 36 minimum
Hrs Resident Credit for Academic Recognition: 56 minimum
Total Community College Hrs: 64 maximum

General University Requirements
Legend
General Studies Core Requirements:
- Literacy and Critical Inquiry (L)
- Mathematical Studies (MA)
- Computer/Statistics/Quantitative Applications (CS)
- Humanities, Arts and Design (HU)
- Social-Behavioral Sciences (SB)
- Natural Science - Quantitative (SQ)
- Natural Science - General (SG)

General Studies Awareness Requirements:
- Cultural Diversity in the U.S. (C)
- Global Awareness (G)
- Historical Awareness (H)

First-Year Composition

General Studies designations listed on the major map are current for the 2015 - 2016 academic year.

ASU College of Liberal Arts and Sciences — Transforming learning, discovery and lives
TO: CLAS Curriculum Committee

FROM: Brian H. Smith, Director
School of Life Sciences

DATE: March 13, 2014

SUBJECT: Biomedical Sciences Concentration

The concentration in Biomedical Sciences within the Microbiology degree program was developed and approved by the School of Life Sciences Undergraduate Programs Committee. The proposed concentration will integrate well with our existing programs and will require few additional teaching resources. The concentration will benefit our students and has my support.

Sincerely,

Brian Smith
School Director and Professor
School of Life Sciences
Arizona State University
Hello Scot -

No objections from physics. Thank you for keeping us in the loop.

Subject: Impact statement-new concentration in SOLS

lxchell-

The School of Life Sciences is looking to propose two new concentrations for Fall 2015: Medical Microbiology and Biological Sciences: Biomedical Sciences.

I have attached the two proposals and wanted to see if you had any objections. Basically, these concentrations would follow similar models in requiring either one semester (PHY 101) or 1 year (PHY 111/113 and PHY 112/114) of general physics.

CLAS requested we run this by you to make sure you do not object. At this point, it is hard to say if this will increase our overall enrollment or simply shift student preferences in concentrations within SOLS.

With that said, any objections?

Scot Schoenborn

Subject: New concentration in SOLS

Hi Alissa,

Thanks for your feedback Alissa.

Yes, I can make the changes you request.

Sincerely,

Scott Schoenborn

Subject: Re: New concentration in SOLS

Hi Scott,

Thanks for contexting us. I am copying Kelly Kudlowski who is working with me on curriculum now. All these courses look good, and we may be adding more onto the list in the next year or two. Please be aware that these classes aren’t always offered during the regular semester, although we do tend to offer many of them online in the summer, and on our summer study abroad programs. Lastly, two things: 1) can you be sure to list the effects of the SOL courses that are ASU and ASM (If these are most recognized and we offer more seats in them); 2) you have SSU 404 listed twice.

Best,
Alissa

Here is the list of courses with x:

ASB 345 Disease and Human Evolution 3
ASB 355 Traditional Medicine and Healing 3
ASB 463/555 404 Medical Anthropology: Culture and Health 3

SSU 404 (crosslisted as ASB 401 and HST 301) Global History of Health 3
ASB 402/502 401 Health and Human Biology 3
ASB 452/552 402 Community Partnerships for Global Health 3

SSU 404 (crosslisted as ASB 443) Cross Cculural Studies in Global Health 3

Hi Alissa,

We are sending a proposal for a new concentration in SOLS, Biological Sciences. Biomedical Sciences. We would like to hear some of your coursework options for our students.

Students must pick one course from the following list (which includes some of your courses):

Hi Jenny-

We heard back from Chemistry regarding our intention to create two new concentrations (below). Would you like me to scan this and send to you, or is this sufficient?

Dear Miles and Scot,

After careful consideration, the Department of Chemistry and Biochemistry is pleased to support the implementation of the two new concentrations (Medical Microbiology and Biological Sciences: Biomedical Sciences) by the School of Life Sciences. The Department of Chemistry and Biochemistry will be able to accommodate any increase in enrollment in our chemistry (e.g. CHM 113, 116, 231, 235, 233, 234, 237, 238) and biochemistry (BCH 361 & 367) courses that results from the implementation of these two programs.

Best regards,

Wilson

Wilson A. Francisco, PhD
Associate Professor and Associate Chair
