

ARIZONA STATE UNIVERSITY  
GENERAL STUDIES COURSE PROPOSAL COVER FORM

**Course information:**

Copy and paste current course information from Class Search/Course Catalog.

Academic Unit	<u>College of Health Solutions</u>	Department	<u>School for the Science of Health Care Delivery</u>
Subject	<u>HCD</u>	Number	<u>300</u>
		Title	<u>Biostatistics</u>
		Units:	<u>3</u>
Is this a cross-listed course?	(Choose one)		
If yes, please identify course(s)	<u>PBH 300</u>		
Is this a shared course?	(choose one) If so, list all academic units offering this course		<u>Public Health and SHCD</u>

Course description:

Biostatistics and its use in health and health services research. Familiarize students with statistical concepts and methods to analyze and interpret data and conceptually addresses statistical theory. Introduces SPSS software to analyze large data sets.

**Requested designation:** Mathematical Studies–CS

Note– a separate proposal is required for each designation requested

**Eligibility:**

Permanent numbered courses must have completed the university's review and approval process. For the rules governing approval of omnibus courses, contact [Phyllis.Lucie@asu.edu](mailto:Phyllis.Lucie@asu.edu) or [Lauren.Leo@asu.edu](mailto:Lauren.Leo@asu.edu).

**Submission deadlines dates are as follow:**

For Fall 2015 Effective Date: October 9, 2014

For Spring 2016 Effective Date: March 19, 2015

**Area(s) proposed course will serve:**

A single course may be proposed for more than one core or awareness area. A course may satisfy a core area requirement and more than one awareness area requirements concurrently, but may not satisfy requirements in two core areas simultaneously, even if approved for those areas. With departmental consent, an approved General Studies course may be counted toward both the General Studies requirement and the major program of study.

**Checklists for general studies designations:**

Complete and attach the appropriate checklist

- Literacy and Critical Inquiry core courses (L)
- Mathematics core courses (MA)
- Computer/statistics/quantitative applications core courses (CS)
- Humanities, Arts and Design core courses (HU)
- Social-Behavioral Sciences core courses (SB)
- Natural Sciences core courses (SQ/SG)
- Cultural Diversity in the United States courses (C)
- Global Awareness courses (G)
- Historical Awareness courses (H)

**A complete proposal should include:**

- Signed General Studies Program Course Proposal Cover Form
- Criteria Checklist for the area
- Course Catalog description
- Course Syllabus
- Copy of Table of Contents from the textbook and list of required readings/books

**Respectfully request that proposals are submitted electronically with all files compiled into one PDF. If necessary, a hard copy of the proposal will be accepted.**

**Contact information:**

Name	<u>Kate Lehman</u>	Phone	<u>602-496-0241</u>
Mail code	<u>3020</u>	E-mail:	<u>Kate.Lehman@asu.edu</u>

**Department Chair/Director approval: (Required)**

Chair/Director name (Typed):	<u>Natalie Landman</u>	Date:	<u>8/5/14</u>
------------------------------	------------------------	-------	---------------

ARIZONA STATE UNIVERSITY

Chair/Director (Signature):

A handwritten signature in cursive script, appearing to be 'L. J. ...', written over a horizontal line.

## Arizona State University Criteria Checklist for

### **MATHEMATICAL STUDIES [CS]**

#### **Rationale and Objectives**

The **Mathematical Studies** requirement is intended to ensure that students have skill in basic mathematics, can use mathematical analysis in their chosen fields, and can understand how computers can make mathematical analysis more powerful and efficient. The **Mathematical Studies** requirement is completed by satisfying both the **Mathematics [MA]** requirement and the **Computer/Statistics/Quantitative Applications [CS]** requirement explained below.

The **Mathematics [MA]** requirement, which ensures the acquisition of essential skill in basic mathematics, requires the student to complete a course in College Mathematics, College Algebra, or Pre-calculus; or demonstrate a higher level of skill by completing a mathematics course for which a course in the above three categories is a prerequisite.

The **Computer/Statistics/Quantitative Applications [CS]** requirement, which ensures skill in real world problem solving and analysis, requires the student to complete a course that uses some combination of computers, statistics, and/or mathematics.\* Computer usage is encouraged but not required in statistics and quantitative applications courses. At a minimum, such courses should include multiple demonstrations of how computers can be used to perform the analyses more efficiently.

\*CS does *not* stand for computer science in this context; the “S” stands for statistics. Courses in computer science must meet the criteria stated for CS courses.

Revised April 2014

Proposer: Please complete the following section and attach appropriate documentation.

<b>ASU--[CS] CRITERIA</b>			
<b>A COMPUTER/STATISTICS/QUANTITATIVE APPLICATIONS [CS] COURSE MUST SATISFY ONE OF THE FOLLOWING CRITERIA: 1, 2, OR 3</b>			
YES	NO		Identify Documentation Submitted
		<b>1. Computer applications*:</b> courses must satisfy both <b>a</b> and <b>b</b> :	
<input type="checkbox"/>	<input type="checkbox"/>	<b>a.</b> Course involves the use of computer programming languages or software programs for quantitative analysis, algorithmic design, modeling, simulation, animation, or statistics.	
		<b>b.</b> Course requires students to analyze and implement procedures that are applicable to at least one of the following problem domains ( <b>check those applicable</b> ):	
<input type="checkbox"/>	<input type="checkbox"/>	i. Spreadsheet analysis, systems analysis and design, and decision support systems.	
<input type="checkbox"/>	<input type="checkbox"/>	ii. Graphic/artistic design using computers.	
<input type="checkbox"/>	<input type="checkbox"/>	iii. Music design using computer software.	
<input type="checkbox"/>	<input type="checkbox"/>	iv. Modeling, making extensive use of computer simulation.	
<input type="checkbox"/>	<input type="checkbox"/>	v. Statistics studies stressing the use of computer software.	
<input type="checkbox"/>	<input type="checkbox"/>	vi. Algorithmic design and computational thinking.	
<p>*The <b>computer applications</b> requirement <b>cannot</b> be satisfied by a course, the content of which is restricted primarily to word processing or report preparation skills, the study of the social impact of computers, or methodologies to select software packages for specific applications. Courses that emphasize the use of a computer software package are acceptable only if students are required to understand, at an appropriate level, the theoretical principles embodied in the operation of the software and are required to construct, test, and implement procedures that use the software to accomplish tasks in the applicable problem domains. Courses that involve the learning of a computer programming language are acceptable only if they also include a substantial introduction to applications to one of the listed problem domains.</p>			

YES	NO		Identify Documentation Submitted
		<b>2. Statistical applications:</b> courses must satisfy <b>a, b,</b> and <b>c.</b>	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	<b>a.</b> Course has a minimum mathematical prerequisite of College Mathematics, College Algebra, or Pre-calculus, or a course already approved as satisfying the MA requirement.	syllabus prerequisites section
		<b>b.</b> The course must be focused principally on developing knowledge in statistical inference and include coverage of all of the following:	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	i. Design of a statistical study.	See blue highlighted areas
<input checked="" type="checkbox"/>	<input type="checkbox"/>	ii. Summarization and interpretation of data.	See gray highlighted areas
<input checked="" type="checkbox"/>	<input type="checkbox"/>	iii. Methods of sampling.	See blue highlighted areas
<input checked="" type="checkbox"/>	<input type="checkbox"/>	iv. Standard probability models.	See purple highlighted areas
<input checked="" type="checkbox"/>	<input type="checkbox"/>	v. Statistical estimation	See yellow highlighted areas
<input checked="" type="checkbox"/>	<input type="checkbox"/>	vi. Hypothesis testing.	See blue highlighted areas
<input checked="" type="checkbox"/>	<input type="checkbox"/>	vii. Regression or correlation analysis.	See gray highlighted areas
<input checked="" type="checkbox"/>	<input type="checkbox"/>	<b>c.</b> The course must include multiple demonstrations of how computers can be used to perform statistical analysis more efficiently, if use of computers to carry out the analysis is not required.	See yellow and green highlighted areas

YES	NO		Identify Documentation Submitted
		<b>3. Quantitative applications:</b> courses must satisfy <b>a, b, and c:</b>	
<input type="checkbox"/>	<input type="checkbox"/>	<b>a.</b> Course has a minimum mathematical prerequisite of College Mathematics, College Algebra, or Pre-calculus, or a course already approved as satisfying the MA requirement.	
		<b>b.</b> The course must be focused principally on the use of mathematical models in quantitative analysis and decision making. Examples of such models are:	
<input type="checkbox"/>	<input type="checkbox"/>	i. Linear programming.	
<input type="checkbox"/>	<input type="checkbox"/>	ii. Goal programming.	
<input type="checkbox"/>	<input type="checkbox"/>	iii. Integer programming.	
<input type="checkbox"/>	<input type="checkbox"/>	iv. Inventory models.	
<input type="checkbox"/>	<input type="checkbox"/>	v. Decision theory.	
<input type="checkbox"/>	<input type="checkbox"/>	vi. Simulation and Monte Carlo methods.	
<input type="checkbox"/>	<input type="checkbox"/>	vii. Other (explanation must be attached).	
<input type="checkbox"/>	<input type="checkbox"/>	<b>c.</b> The course must include multiple demonstrations of how computers can be used to perform the above applications more efficiently, if use of computers is not required by students.	

Course Prefix	Number	Title	General Studies Designation
HCD	300	Biostatistics	

Explain in detail which student activities correspond to the **specific** designation criteria.  
Please use the following organizer to explain how the criteria are being met.

Criteria (from checksheet)	How course meets spirit (contextualize specific examples in next column)	Please provide detailed evidence of how course meets criteria (i.e., where in syllabus)
minimum math prerequisite	course requires student to have completed the MA prior to taking the course	Prerequisite listed on page one of the syllabus
course focused on developing statistical inference	covers probability theory, the difference between correlation and causality, study design and methods of sampling, testing of hypotheses, how to interpret regression and summary data.	see highlighted colors on syllabus
Use of computers in statistical analysis	The course uses SPSS to run the data and the students use it in their assignments and are tested on it.	See yellow and green highlighted areas.

## **HCD 300: Biostatistics**

### **Faculty**

Staff

### **Module/Course Placement**

Spring 2014 / Session A or B

Day/Time TBD

Classroom TBD

*Cross listed as PBH 300*

### **Prerequisites or Co-Requisites**

Completion of MA requirement with a C or better and minimum of 45 hours; credit is allowed for only HCD 300 or PBH 300.

### **Catalog Description**

This course serves as an introduction biostatistics and its use in health and health services research. The course will familiarize students with statistical concepts and methods to analyze and interpret data and will address statistical theory conceptually. **Students will also be introduced to SPSS software to analyze large data sets.**

### **Credit Hours**

3 credit hours

### **Methods of Instruction**

**This course includes didactic instruction, in-class learning activities and examples, and SPSS software.**

### **Module/Course Objectives**

Upon completion of this course, the student will be able to:

1. Describe the role of biostatistics in health, public health and health services research;
2. Understand the difference between correlation and causation;
3. Identify different experimental and sampling designs and discuss the strengths and weaknesses of each;
4. Understand the rules of probability;
5. Describe sampling distributions and compute descriptive statistics;
6. Perform various methods of hypothesis testing and identify significant vs non-significant results;
7. Identify when particular statistical methods are appropriately used;
8. Use SPSS software to perform statistical methods discussed in the course

### **Module/Course Requirements (Assignments)**

Students are responsible for completing the following assignments for this course:

1. Midterm exam:

Students will take an in-class midterm exam at the end of week 5. The exam will consist of computation problems and short answers covering content through week 4.

2. Final exam:

Students will take an in-class final exam on the last day of class. The exam will consist of computation problems and short answer questions covering all course content. **Students will also be required to answer a set of questions using SPSS.**

3. Homework Assignments:

There will be 7 homework assignments throughout the course. The assignments will consist of problems from the textbook, covering course content from the previous week.

Assignments will be distributed at the beginning of each week and will be due at the start of class the following week.

DUE EACH WEEK

4. In Class SPSS Exercises:

**There will be 4 SPSS exercises completed in-class. Following a demonstration by the instructor, students will be given a set of problems to complete using SPSS. Students are permitted to collaborate but each student must submit his/her own set of questions.**

## Methods of Evaluation

1. Midterm exam	100 points
2. Final exam	150 points
3. Homework assignments (7 @ 20 points each)	140 points
4. In-class SPSS exercises (4 @ 15 points each)	<u>60 points</u>
Total	450 points

Final grades will be distributed as follows:

97% - 100% = <b>A+</b>	93% - 96.9% = <b>A</b>
90% - 92.9% = <b>A-</b>	87% - 89.9% = <b>B+</b>
83% - 86.9% = <b>B</b>	80% - 82.9% = <b>B-</b>
77% - 79.9% = <b>C+</b>	70% - 76.9% = <b>C</b>
60% - 69.9% = <b>D</b>	Less than 59.9% = <b>E</b>

## Topical Outline

### **Week 1**

Topics: 1) Course overview, introductions and 2) Distributions and Relationships  
Reading assignments: Moore, McCabe, Craig Ch. 1, 2

### **Week 2**

Topics: 1) Producing data – experimental designs, sampling and 2) Probability  
Reading assignments: Moore, McCabe, Craig Ch. 3, 4  
*Homework assignment 1 due*

### **Week 3**

Topics: 1) Sampling distributions and 2) Introduction to inference  
Reading assignments: Moore, McCabe, Craig Ch. 5, 6  
*Homework assignment 2 due*

### **Week 4**

Topic: 1) Inference for the mean of a population and 2) Comparing two means  
Reading assignments: Moore, McCabe, Craig Ch. 7.1, 7.2  
Activities: In-class SPSS exercise  
*Homework assignment 3 due*

### **Week 5**

Topics: 1) Inference for a single proportion and 2) Mid-term exam  
Reading assignments: Moore, McCabe, Craig Ch. Chapter 8.1  
Activities: In-class SPSS exercise  
*Homework assignment 4 due*

**Week 6**

Topic: 1) Comparing 2 proportions and 2) Introduction to Analysis of Variance

Reading assignments: Moore, McCabe, Craig Ch. 8.2, 9.1

Activities: In-class SPSS exercise

*Homework assignment 5 due*

**Week 7**

Topics: 1) Analysis of Variance and 2) Introduction to simple linear regression

Reading assignments: Moore, McCabe, Craig Ch. 9.2, 9.3, 10.1

Activities: In-class SPSS exercise

*Homework assignment 6 due*

**Week 8**

Topics: 1) Course Content Review and 2) Final Exam

*Homework assignment 7 due*

**Materials**

Introduction to the Practice of Statistics (6<sup>th</sup>)

Author(s): Moore, McCabe, Craig and W.H. Freeman and Company, 2009

Health Sciences librarians:

Kevin Pardon: Kevin.Pardon@asu.edu

Virginia Pannabecker: Virginia.Pannabecker@asu.edu

**Expectations of Faculty**

Faculty will be available for student questions and/or discussion during office hours and by appointment. Faculty will answer all student emails and phone calls within a 24-hour time frame (or one working day). Faculty will model professional behavior in and out of the classroom, and treat all students respectfully.

Faculty will:

1. Explain the course structure and objectives at the beginning of the session.
2. Provide a course syllabus and course schedule at the beginning of the session, and oversee administration of evaluation tools and methods.
3. Facilitate the identification of useful learning resources.
4. Provide a respectful and safe learning environment.
5. Provide meaningful feedback to learners.
6. Assure that all learners have equal opportunity to achieve the course objectives.

**Expectations of Students**

1. Come prepared for each session, with thought provoking questions, an open mind, and the desire to make each session truly meaningful for yourself and your peers.
2. Discuss and debate ideas with the faculty and your colleagues in a respectful and professional manner.
3. Turn off cell phones during class time.
4. Submit assignments on time.

5. Attend class, ask questions and don't hesitate to visit me during office hours.

**Accommodations** Students with disabilities who need accommodations in this module/course are encouraged to make their requests to faculty at the beginning of the semester either during office hours or by appointment.

*Note: Prior to receiving disability accommodations, verification of eligibility from the Disability Resource Center (DRC) is required. The DRC is located in University Center, 411 N. Central Avenue, Suite 160. DRC staff can also be reached at: 602-496-4321 (V), 602-496-0378 (TTY), and at: [Disability-Q](#). Their hours are 8:00 AM to 5:00 PM, Monday through Friday. Eligibility and documentation policies can be viewed at: <http://www.asu.edu/drc>. *Disability information is confidential.**

### **Academic Conduct**

All students are held to the ABOR Student Code of Conduct, found at: <https://eoss.asu.edu/dos/srr/codeofconduct>

All students are held to the ASU Student Academic Integrity Policy, found at: <https://provost.asu.edu/sites/default/files/AcademicIntegrityPolicyPDF.pdf>

All students are held to the ASU Policies and Procedures, found at: <https://eoss.asu.edu/dos/srr/PoliciesAndProcedures>

### **Copyright**

Module/course content, including lectures and written materials distributed to the class, are under copyright protection.

Module/course content, including lectures, are copyrighted material and students may not sell notes taken during the conduct of the course.

**Information in the syllabus may be subject to change with reasonable advance notice.**

## PART I Looking at Data

### CHAPTER 1

#### Looking at Data—Distributions 1

##### Introduction 1

Variables	2
Measurement: know your variables	5

##### 1.1 Displaying Distributions with Graphs 6

Graphs for categorical variables	6
Data analysis in action: don't hang up on me	7
Stemplots	9
Histograms	12
Examining distributions	15
Dealing with outliers	17
Time plots	18
<i>Beyond the basics: decomposing time series*</i>	19
Section 1.1 Summary	21
Section 1.1 Exercises	22

##### 1.2 Describing Distributions with Numbers 30

Measuring center: the mean	30
Measuring center: the median	32
Mean versus median	34
Measuring spread: the quartiles	34
The five-number summary and boxplots	36
The $1.5 \times IQR$ rule for suspected outliers	38
Measuring spread: the standard deviation	40
Properties of the standard deviation	42
Choosing measures of center and spread	43
Changing the unit of measurement	45
Section 1.2 Summary	47
Section 1.2 Exercises	48

##### 1.3 Density Curves and Normal Distributions 53

Density curves	55
Measuring center and spread for density curves	56
Normal distributions	58
The 68–95–99.7 rule	59
Standardizing observations	61
Normal distribution calculations	62
Using the standard Normal table	64
Inverse Normal calculations	66
Normal quantile plots	68
<i>Beyond the basics: density estimation</i>	71
Section 1.3 Summary	71
Section 1.3 Exercises	72
Chapter 1 Exercises	78

### CHAPTER 2

#### Looking at Data—Relationships 83

##### Introduction 83

Examining relationships	84
-------------------------	----

##### 2.1 Scatterplots 86

Interpreting scatterplots	88
Adding categorical variables to scatterplots	89
More examples of scatterplots	90
<i>Beyond the basics: scatterplot smoothers</i>	92
Categorical explanatory variables	93
Section 2.1 Summary	94
Section 2.1 Exercises	95

##### 2.2 Correlation 101

The correlation $r$	102
Properties of correlation	102
Section 2.2 Summary	105
Section 2.2 Exercises	105

##### 2.3 Least-Squares Regression 108

Fitting a line to data	110
Prediction	111
Least-squares regression	112
Interpreting the regression line	115

Sections marked with an asterisk are optional.

Correlation and regression	115	Randomized comparative experiments	183
*Understanding $r^2$	118	How to randomize	184
Beyond the basics: transforming relationships	119	Cautions about experimentation	188
Section 2.3 Summary	121	Matched pairs designs	189
Section 2.3 Exercises	122	Block designs	190
		Section 3.1 Summary	191
		Section 3.1 Exercises	192
<b>2.4 Cautions about Correlation and Regression</b>	<b>125</b>	<b>3.2 Sampling Design</b>	<b>197</b>
Residuals	126	Simple random samples	200
Outliers and influential observations	129	Stratified samples	202
Beware the lurking variable	132	Multistage samples	203
Beware correlations based on averaged data	135	Cautions about sample surveys	204
The restricted-range problem	135	Section 3.2 Summary	207
Beyond the basics: data mining	136	Section 3.2 Exercises	208
Section 2.4 Summary	137		
Section 2.4 Exercises	137	<b>3.3 Toward Statistical Inference</b>	<b>212</b>
		Sampling variability	213
<b>2.5 Data Analysis for Two-Way Tables</b>	<b>142</b>	Sampling distributions	214
The two-way table	142	Bias and variability	217
Joint distribution	144	Sampling from large populations	219
Marginal distributions	145	Why randomize?	219
Describing relations in two-way tables	146	Beyond the basics: capture-recapture sampling	220
Conditional distributions	146	Section 3.3 Summary	221
Simpson's paradox	148	Section 3.3 Exercises	221
The perils of aggregation	151		
Section 2.5 Summary	151	<b>3.4 Ethics</b>	<b>224</b>
Section 2.5 Exercises	152	Institutional review boards	225
		Informed consent	226
<b>2.6 The Question of Causation</b>	<b>154</b>	Confidentiality	227
Explaining association: causation	154	Clinical trials	228
Explaining association: common response	155	Behavioral and social science experiments	230
Explaining association: confounding	156	Section 3.4 Summary	232
Establishing causation	157	Section 3.4 Exercises	232
Section 2.6 Summary	159	Chapter 3 Exercises	234
Section 2.6 Exercises	159		
Chapter 2 Exercises	161		
<b>CHAPTER 3</b>		<b>PART II</b>	<b>Probability and Inference</b>
<b>Producing Data</b>	<b>171</b>		
Introduction	171	<b>CHAPTER 4</b>	
Anecdotal data	171	<b>Probability: The Study of Randomness</b>	<b>237</b>
Available data	172	Introduction	237
Sample surveys and experiments	173		
		<b>4.1 Randomness</b>	<b>237</b>
<b>3.1 Design of Experiments</b>	<b>178</b>	The language of probability	239
Comparative experiments	180	Thinking about randomness	240
Randomization	181		

The uses of probability	241	<b>CHAPTER 5</b>	
Section 4.1 Summary	241	<b>Sampling Distributions</b>	<b>311</b>
Section 4.1 Exercises	241	Introduction	311
<b>4.2 Probability Models</b>	<b>242</b>	5.1 Sampling Distributions for Counts and Proportions	313
Sample spaces	243	The binomial distributions for sample counts	314
Probability rules	245	Binomial distributions in statistical sampling	315
Assigning probabilities: finite number of outcomes	248	Finding binomial probabilities: software and tables	316
Assigning probabilities: equally likely outcomes	249	Binomial mean and standard deviation	319
Independence and the multiplication rule	251	Sample proportions	321
Applying the probability rules	254	Normal approximation for counts and proportions	322
Section 4.2 Summary	255	The continuity correction*	326
Section 4.2 Exercises	255	Binomial formula*	327
<b>4.3 Random Variables</b>	<b>258</b>	Section 5.1 Summary	330
Discrete random variables	259	Section 5.1 Exercises	331
Continuous random variables	263	<b>5.2 The Sampling Distribution of a Sample Mean</b>	<b>335</b>
Normal distributions as probability distributions	265	The mean and standard deviation of $\bar{x}$	337
Section 4.3 Summary	267	The central limit theorem	339
Section 4.3 Exercises	267	A few more facts	343
<b>4.4 Means and Variances of Random Variables</b>	<b>270</b>	Beyond the basics: Weibull distributions	344
The mean of a random variable	270	Section 5.2 Summary	346
Statistical estimation and the law of large numbers	273	Section 5.2 Exercises	348
Thinking about the law of large numbers	275	Chapter 5 Exercises	350
Beyond the basics: more laws of large numbers	277	<b>CHAPTER 6</b>	
Rules for means	277	<b>Introduction to Inference</b>	<b>353</b>
The variance of a random variable	279	Introduction	353
Rules for variances and standard deviations	281	Overview of inference	354
Section 4.4 Summary	285	6.1 Estimating with Confidence	356
Section 4.4 Exercises	286	Statistical confidence	356
<b>4.5 General Probability Rules*</b>	<b>289</b>	Confidence intervals	358
General addition rules	290	Confidence interval for a population mean	360
Conditional probability	293	How confidence intervals behave	363
General multiplication rules	298	Choosing the sample size	364
Tree diagrams	299	Some cautions	366
Bayes's rule	301	Beyond the basics: the bootstrap	368
Independence again	302	Section 6.1 Summary	368
Section 4.5 Summary	302	Section 6.1 Exercises	369
Section 4.5 Exercises	303	<b>6.2 Tests of Significance</b>	<b>372</b>
Chapter 4 Exercises	307	The reasoning of significance tests	372

Stating hypotheses	374	The two-sample $t$ procedures	450
Test statistics	376	The two-sample $t$ significance test	451
$P$ -values	377	The two-sample $t$ confidence interval	454
Statistical significance	379	Robustness of the two-sample procedures	456
Tests for a population mean	382	Inference for small samples	457
Two-sided significance tests and confidence intervals	386	Software approximation for the degrees of freedom*	460
$P$ -values versus fixed $\alpha$	388	The pooled two-sample $t$ procedures*	461
Section 6.2 Summary	390	Section 7.2 Summary	466
Section 6.2 Exercises	390	Section 7.2 Exercises	467
<b>6.3 Use and Abuse of Tests</b>	<b>394</b>	<b>7.3 Optional Topics in Comparing Distributions*</b>	<b>473</b>
Choosing a level of significance	395	Inference for population spread	473
What statistical significance does not mean	396	The $F$ test for equality of spread	474
Don't ignore lack of significance	397	Robustness of Normal inference procedures	476
Statistical inference is not valid for all sets of data	398	The power of the two-sample $t$ test	477
Beware of searching for significance	398	Section 7.3 Summary	479
Section 6.3 Summary	399	Section 7.3 Exercises	479
Section 6.3 Exercises	399	Chapter 7 Exercises	481
<b>6.4 Power and Inference as a Decision*</b>	<b>401</b>	<b>CHAPTER 8</b>	
Power	401	<b>Inference for Proportions</b>	<b>487</b>
Increasing the power	405	Introduction	487
Inference as decision*	406	<b>8.1 Inference for a Single Proportion</b>	<b>488</b>
Two types of error	406	Large-sample confidence interval for a single proportion	488
Error probabilities	407	Beyond the basics: the plus four confidence interval for a single proportion	491
The common practice of testing hypotheses	409	Significance test for a single proportion	493
Section 6.4 Summary	410	Confidence intervals provide additional information	496
Section 6.4 Exercises	410	Choosing a sample size	498
Chapter 6 Exercises	412	Section 8.1 Summary	501
<b>CHAPTER 7</b>		Section 8.1 Exercises	502
<b>Inference for Distributions</b>	<b>417</b>	<b>8.2 Comparing Two Proportions</b>	<b>505</b>
Introduction	417	Large-sample confidence interval for a difference in proportions	506
<b>7.1 Inference for the Mean of a Population</b>	<b>418</b>	Beyond the basics: plus four confidence interval for a difference in proportions	509
The $t$ distributions	418	Significance test for a difference in proportions	511
The one-sample $t$ confidence interval	420	Beyond the basics: relative risk	515
The one-sample $t$ test	422	Section 8.2 Summary	516
Matched pairs $t$ procedures	428	Section 8.2 Exercises	517
Robustness of the $t$ procedures	432	Chapter 8 Exercises	519
The power of the $t$ test*	433		
Inference for non-Normal populations*	435		
Section 7.1 Summary	440		
Section 7.1 Exercises	441		
<b>7.2 Comparing Two Means</b>	<b>447</b>		
The two-sample $z$ statistic	448		

**PART III** Topics in Inference

**CHAPTER 9**  
**Analysis of Two-Way Tables** **525**

Introduction 525

9.1 Inference for Two-Way Tables 526

- The hypothesis: no association 529
- Expected cell counts 529
- The chi-square test 530
- The chi-square test and the z test 533
- Beyond the basics\* meta-analysis 534
- Section 9.1 Summary 536

9.2 Formulas and Models for Two-Way Tables\* 536

- Computations 536
- Computing conditional distributions 537
- Computing expected cell counts 540
- The  $X^2$  statistic and its  $P$ -value 540
- Models for two-way tables 541
- Concluding remarks 544
- Section 9.2 Summary 545

9.3 Goodness of Fit\* 545

- Section 9.3 Summary 548
- Chapter 9 Exercises 548

**CHAPTER 10**  
**Inference for Regression** **559**

Introduction 559

10.1 Simple Linear Regression 560

- Statistical model for linear regression 560
- Data for simple linear regression 561
- Estimating the regression parameters 565
- Confidence intervals and significance tests 570
- Confidence intervals for mean response 572
- Prediction intervals 574
- Beyond the basics: nonlinear regression 576
- Section 10.1 Summary 578

10.2 More Detail about Simple Linear Regression\* 579

- Analysis of variance for regression 579
- The ANOVA  $F$  test 581
- Calculations for regression inference 583
- Inference for correlation 590

Section 10.2 Summary 593

Chapter 10 Exercises 594

**CHAPTER 11**  
**Multiple Regression** **607**

Introduction 607

11.1 Inference for Multiple Regression 607

- Population multiple regression equation 607
- Data for multiple regression 608
- Multiple linear regression model 609
- Estimation of the multiple regression parameters 610
- Confidence intervals and significance tests for regression coefficients 611
- ANOVA table for multiple regression 612
- Squared multiple correlation  $R^2$  613

11.2 A Case Study 615

- Preliminary analysis 615
- Relationships between pairs of variables 616
- Regression on high school grades 618
- Interpretation of results 619
- Residuals 620
- Refining the model 621
- Regression on SAT scores 622
- Regression using all variables 623
- Test for a collection of regression coefficients 623
- Beyond the basics: multiple logistic regression 625
- Chapter 11 Summary 627
- Chapter 11 Exercises 628

**CHAPTER 12**  
**One-Way Analysis of Variance** **637**

Introduction 637

12.1 Inference for One-Way Analysis of Variance 638

- Data for one-way ANOVA 638
- Comparing means 639
- The two-sample  $t$  statistic 640
- An overview of ANOVA 641
- The ANOVA model 644
- Estimates of population parameters 646
- Testing hypotheses in one-way ANOVA 648
- The ANOVA table 649
- The  $F$  test 652

12.2 Comparing the Means	655
Contrasts	655
Multiple comparisons	661
Software	665
Power*	666
Section 12.2 Summary	669
Chapter 12 Exercises	670

## CHAPTER 13 Two-Way Analysis of Variance 683

Introduction	683
13.1 The Two-Way ANOVA Model	684
Advantages of two-way ANOVA	684
The two-way ANOVA model	688
Main effects and interactions	689
13.2 Inference for Two-Way ANOVA	694
The ANOVA table for two-way ANOVA	694
Section 13.2 Summary	695
Chapter 13 Exercises	699

Companion Chapters for the IPS Web site  
([www.whfreeman.com/ips6e](http://www.whfreeman.com/ips6e) and CD-ROM)

## CHAPTER 14 Logistic Regression 14-1

Introduction	14-1
14.1 The Logistic Regression Model	14-1
Binomial distributions and odds	14-2
Odds for two samples	14-3
Model for logistic regression	14-4
Fitting and interpreting the logistic regression model	14-6
14.2 Inference for Logistic Regression	14-8
Confidence intervals and significance tests	14-8
Multiple logistic regression	14-14
Section 14.2 Summary	14-16
Chapter 14 Exercises	14-17
Chapter 14 Notes	14-23

## CHAPTER 15 Nonparametric Tests 15-1

Introduction	15-1
15.1 The Wilcoxon Rank Sum Test	15-3
The rank transformation	15-4
The Wilcoxon rank sum test	15-5
The Normal approximation	15-7
What hypotheses does Wilcoxon test?	15-8
Ties	15-10
Rank, $t$ , and permutation tests	15-12
Section 15.1 Summary	15-14
Section 15.1 Exercises	15-15
15.2 The Wilcoxon Signed Rank Test	15-17
The Normal approximation	15-20
Ties	15-21
Section 15.2 Summary	15-23
Section 15.2 Exercises	15-23
15.3 The Kruskal-Wallis Test*	15-26
Hypotheses and assumptions	15-28
The Kruskal-Wallis test	15-28
Section 15.3 Summary	15-30
Section 15.3 Exercises	15-31
Chapter 15 Exercises	15-33
Chapter 15 Notes	15-35

## CHAPTER 16 Bootstrap Methods and Permutation Tests 16-1

Introduction	16-1
Software	16-2
16.1 The Bootstrap Idea	16-3
The big idea: resampling and the bootstrap distribution	16-4
Thinking about the bootstrap idea	16-9
Using software	16-10
Section 16.1 Summary	16-11
Section 16.1 Exercises	16-11
16.2 First Steps in Using the Bootstrap	16-13
Bootstrap $t$ confidence intervals	16-13
Bootstrapping to compare two groups	16-17
Beyond the basics: the bootstrap for a scatterplot smoother	16-20
Section 16.2 Summary	16-21
Section 16.2 Exercises	16-22

16.3 How Accurate Is a Bootstrap Distribution?*	16-24	$\bar{x}$ charts for process monitoring	17-8
Bootstrapping small samples	16-26	$s$ charts for process monitoring	17-12
Bootstrapping a sample median	16-28	Section 17.1 Summary	17-17
Section 16.3 Summary	16-28	Section 17.1 Exercises	17-17
Section 16.3 Exercises	16-30	17.2 Using Control Charts	17-21
16.4 Bootstrap Confidence Intervals	16-30	$\bar{x}$ and $R$ charts	17-22
Bootstrap percentile confidence intervals	16-31	Additional out-of-control rules	17-23
More accurate bootstrap confidence intervals: BCa and tilting	16-32	Setting up control charts	17-25
Confidence intervals for the correlation	16-35	Comments on statistical control	17-30
Section 16.4 Summary	16-38	Don't confuse control with capability!	17-33
Section 16.4 Exercises	16-38	Section 17.2 Summary	17-34
16.5 Significance Testing Using Permutation Tests	16-41	Section 17.2 Exercises	17-35
Using software	16-45	17.3 Process Capability Indexes*	17-39
Permutation tests in practice	16-45	The capability indexes $C_p$ and $C_{pk}$	17-41
Permutation tests in other settings	16-49	Cautions about capability indexes	17-44
Section 16.5 Summary	16-52	Section 17.3 Summary	17-45
Section 16.5 Exercises	16-52	Section 17.3 Exercises	17-46
Chapter 16 Exercises	16-56	17.4 Control Charts for Sample Proportions	17-49
Chapter 16 Notes	16-59	Control limits for $p$ charts	17-50
<b>CHAPTER 17</b>		Section 17.4 Summary	17-54
<b>Statistics for Quality: Control and Capability</b>	<b>17-1</b>	Section 17.4 Exercises	17-54
Introduction	17-1	Chapter 17 Exercises	17-56
Use of data to assess quality	17-2	Chapter 17 Notes	17-57
17.1 Processes and Statistical Process Control	17-3	Data Appendix	D-1
Describing processes	17-3	Tables	T-1
Statistical process control	17-6	Answers to Odd-Numbered Exercises	A-1
		Notes and Data Sources	N-1
		Photo Credits	C-1
		Index	I-1
