Mandatory Review
Rationale and Objectives

The importance of the social and behavioral sciences is evident in both the increasing number of scientific inquiries into human behavior and the amount of attention paid to those inquiries. In both private and public sectors people rely on social scientific findings to assess the social consequences of large-scale economic, technological, scientific, and cultural changes.

Social scientists' observations about human behavior and their unique perspectives on human events make an important contribution to civic dialogue. Today, those insights are particularly crucial due to the growing economic and political interdependence among nations.

Courses proposed for General Studies designation in the Social and Behavioral Sciences area must demonstrate emphases on: (1) social scientific theories and principles, (2) the methods used to acquire knowledge about cultural or social events and processes, and (3) the impact of social scientific understanding on the world.
Proposer: Please complete the following section and attach appropriate documentation.

### ASU-[SB] CRITERIA

A SOCIAL AND BEHAVIORAL SCIENCE [SB] course should meet all of the following criteria. If not, a rationale for exclusion should be provided.

SYLLABUS

Course Description

The course will provide an overview of evidence relating to dynamics of civilizations in ancient Africa, their foundation, growth, and failure, which spans a period of two million years, though with particular emphasis upon the last ten thousand years. The following themes will be addressed: Sources of African Past, History of archaeology in Africa, overview of human origin in Africa, the emergence of agriculture and settled communities, ancient African metallurgy, Trans-Saharan trade and Islam, Cities and states formation in the Middle Nile, Savanna and Forest regions of Africa, Early European contact in Africa, colonial settlements and material culture. Videos, Slide films will supplement the lecture and discussion formats. The course meets social/behavioral, historical and global requirements.

Aims: To examine through a coherent program of study and with the aid of primary and secondary source material (including recorded oral tradition) aspects of African civilization before 1850. To enable students explore the various methods used by Africanists to reconstruct the pre-colonial past and to pursue how these methods have revealed important themes in African history and the nature of pre-colonial African political, social and economic institutions.

Objectives: To allow students to:

- Develop sensitivity to African perceptions of their own past and have recognized the limitations of Eurocentric models of interpreting African past.
• Gain appreciation of archaeology and other primary sources for the study of African past and of the techniques for its recovery and reconstruction; in particular, to have developed an ability to assess the relative utility of these source materials, and to categorize and evaluate evidence from secondary sources.
• Learn how geography, climate, vegetation, soils and resources have affected the development of societies and cultures in Africa.
• Able to distinguish carefully the numerous and highly variable civilizations in Africa, their foundation, growth, and collapse.
• Obtain introductory knowledge of African studies and its importance to the overall cross-cultural and diverse educational experiences of students in higher educational institutions.

Approaches to the course material and Examination

The course will follow four complementary approaches: (1) the lectures provide overviews of large themes and periods; they illustrate general points with examples and case studies. The lectures thus present the instructor’s interpretation of the subject but make no systematic attempt at comprehensive coverage of what happened; (2) the readings which are to be completed before the week for which they appear in the syllabus, provide detail and texture to the themes and periods covered in lecture; (3) class discussions give students opportunity to contribute and ask questions about parts of the readings and lectures that either confuse or inspire their interest. (4) Finally, examinations consist of 3 sets of multiple-choice questions and short answers, and weekly reaction papers on readings provided in the reading packet.

Requirements for superior achievement in the course (i.e. an A or better) include regular attendance with no unexplained absences, always completing the reading for each week before the class meeting, regular and active participation in discussions, and thoughtful and well-written papers. Anyone missing a class should notify me by telephone or email before the said class, not after. Absences explained AFTER the fact will affect your final grade.

Required Texts:
The following books should be read according to the timetable set forth in the attached schedule. They are available at the University Bookstore on campus.

3. In addition to the above texts, I will make available other readings on relevant topics in course packet to be purchased at the Alternative Copy, located north of University road on Forest Street (480-829-7992).

**Required Coursework**

Attendance, preparation, and participation in class discussions are required. Failure to meet this expectation will lower your final grade. All discussions will be held at days and time specified in the syllabus. Please, make sure all the readings are completed before the day.

*Weekly reaction papers*: These should be about 1-2 page in length, but you may write more if you wish. The paper should record your reaction or critique of the week’s assigned reading(s). Each paper should also raise one or more questions or issues for the class to deliberate. The purpose of the papers is for me to get a sense of how you are thinking critically about the readings and to help you prepare for your participation in the class discussions. Weekly papers are due in my office a day prior to the seminar. For example, if the seminar is on Tuesday, then your paper must be in by Monday. Again, make sure you keep a copy of the paper for yourself and for class discussion.

*** Note: No late papers will be accepted.

**Examination Requirement/Distribution:**
Reaction papers (4 papers total) = 80 points (20 points each)
Exams (3) = 210 points (70 points each)
Attendance/participation = 10 points
Total points = 300

At the discretion of the instructor, an extra credit assignment may be given. The course grading scale is as follows:
