[FAQ](#)

We consult with academic units as they develop and implement strategies to measure student learning at the program level. Strategies include the identification of learning outcomes, the means for measuring student learning on those outcomes, and follow-up activities to review and act on assessment data. The purpose of these efforts is to provide information that can be used to improve student learning. The primary goal is the improvement of student learning, not accountability.

Assessment Handbook

To assist units in the assessment planning process, we created a handbook: [Five Steps to Effective Assessment Planning, Reporting, and Decision Making](#). Please refer to this handbook as you create your assessment plans and reports. To access this handbook, please authenticate using your [ASURITE](#).

Assessment Portal

This portal allows users to navigate assessment information for active and new programs. Users have access to 1) view current assessment plans and submit updated assessment plans; 2) submit information on new programs; and 3) view prior assessment reports and submit updated assessment reports for the current cycle.
