A NEW WAY TO GET CONNECTED

introducing improved wifi 

Improvements designed to enhance security, reliability, and stability of the ASU wireless network were put in place Monday, Aug. 1. To simplify the ASU network and enhance safety for all users, "ASU" is now encrypted and "ASU Guest" requires registration and is not encrypted.

NOTE: The "ASU Guest" wireless connection is not an encrypted network. This connection only allows for general internet access. You will not be able to visit Blackboard or My ASU with this connection. Registering with the ASU Guest portal, Sponsor portal or MyDevice portal allows connection to the "ASU Guest" wireless network.

To login to the encrypted wireless on your device:

1. Select the wireless settings
2. Select ASU from the list of wireless networks
3. Log in with your ASURITE ID and password and accept the certificate if prompted

If you experience issues, please call the Help Center at 1-855-278-5080 and give them details so UTO can investigate further. Lastly, please follow us at @asu_outages for the latest information.

ASU is #1 in the U.S. for Innovation
